SUMMARY

Full-stack software developer with **nearly 3 years** of experience building scalable web applications using **React, TypeScript, Python, and REST APIs**. Experienced in developing reusable frontend components, API-driven features, **microservice integrations**, and AI applications involving **NLP, LLMs, and RAG**. Combines strong technical execution with a UI/UX and product-oriented mindset, translating user and business requirements into maintainable software. Comfortable contributing across the development lifecycle, from architecture and implementation to **testing, documentation, and deployment**.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, SQL, Python, Java, C#, PHP, HTML5, CSS3
- **Frontend:** React, Vue.js, jQuery, AJAX, Sass, Bootstrap, Responsive Design, State Management
- **Backend:** Node.js, Django, Flask, REST APIs, ASP.Net, Microservices, Object-Oriented Programming
- **Databases & AI:** PostgreSQL, MongoDB, Redis, NLP, LLM, RAG Applications
- **DevOps & Cloud:** Docker, AWS, CI/CD, Git, SonarQube

QUALIFICATION HIGHLIGHTS

- **Standardized** system diagrams and documentation to **improve onboarding and cross-functional alignment**.
- Translate **UI/UX** requirements into maintainable **full-stack implementations** with a product-oriented mindset.
- Apply **SDLC, MVC, RBAC, and WCAG principles** across application design and development.
- Applied **critical thinking during early-stage requirement analysis** to define system architecture and product direction, spanning AI applications and full-stack systems.

WORK EXPERIENCE

Student AI Researcher, George Brown College, Canada, Oct. 2025–Dec. 2025

- Integrated a **no-code chatbot** interface into a **React and TypeScript** application by isolating UI state and interaction logic through **reusable abstractions**.
- Documented **RAG and explainable AI (XAI)** architectures through system diagrams and technical documentation, improving alignment across research and engineering stakeholders.
- Evaluated 8+ **usability-testing tools** and open-source **SLMs** to support technology selection.
- Assessed the feasibility and cross-platform compatibility of a usability-testing system integration.

Software Developer, MIRLE Automation Corporation, Taiwan, 2022–2024

- Engineered a **customizable dashboard** with **dynamic styling & data sources**, cutting user decision time by 70%.
- Developed **reusable Vue.js and TypeScript components** that standardized UI development and accelerated feature delivery by 25%.
- Built **Python APIs** to enable real-time **data sync across microservices**, eliminating manual data reconciliation.
- Standardized technical **documentation and system assessments**, reducing development time by 30% and improving team workflow consistency.
- Improved code maintainability through structured **code reviews and targeted refactoring**, reducing redundant code by 50%.

SELECTED PROJECTS

Lost and Found Management System, George Brown College, Jan. 2026–Apr. 2026

- Designed **RBAC-based security architecture** to manage access across 3 user roles, ensuring secure access.
- Configured and deployed independently a three-tier website with **CI/CD**, reducing release effort by 90%.
- Developed **Python+Django backend APIs**, achieving a 96% pass rate across 35 test cases with 0 critical defects.

DeepHeart AI-based Emotion Tracker, AI Application Development Bootcamp, Jan. 2022–Mar. 2022

- **Proposed and spearheaded** an AI-powered emotion detection product from concept through implementation.
- Addressed inaccuracies in sentiment analysis by **fine-tuning the BERT NLP model**, achieving 75-80% accuracy.
- Resolved noisy text using a **data preprocessing pipeline**, boosting accuracy by 20% across 29,000+ samples.

EDUCATION

Diploma of Computer Programming, George Brown College, 2025–2026

Bachelor of Art and Design, National Dong Hwa University, 2013–2017

CERTIFICATIONS

AI Application Development Bootcamp, 2021–2022

UI/UX Interface Design Course, 2021
